## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-15 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Specification lacks teaching on the specifics regarding the release and reconnect of the logical connection. In normal situation, once a connection is released, the reconnect procedure would include many steps that need to be performed between two entities. In the present specification, it is made overly simple by suggesting a "reconnect" when the relay of user data resumes. How is the reconnection performed? It is not clear if some kind of basic connection is maintained during the released period. In other words, it is not clear how the connection is resumed in such a simple manner after a release has been made.

Further, logical connection inherently refers to an end-to-end connection. However, in the present specification, it is taught that a logical connection between the serving node and the RNS is release while maintaining the logical connection between

the serving node and the mobile station. Is it implying that there are two logical connections for two different segments in the communication route? It seems that usage of the terms and unconventional steps need to be clarified for better understanding of the specification.

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Lee et al. patent, 6,456,604, the Miyata patent, 6,393,001, and the Hata et al. patent, 5,479,402, are cited for further references.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Min Jung whose telephone number is 703-305-4363. The examiner can normally be reached on Monday-Friday, 7AM-3PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chau Nguyen can be reached on 703-308-5340.
